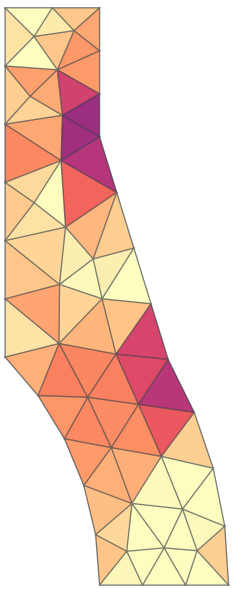
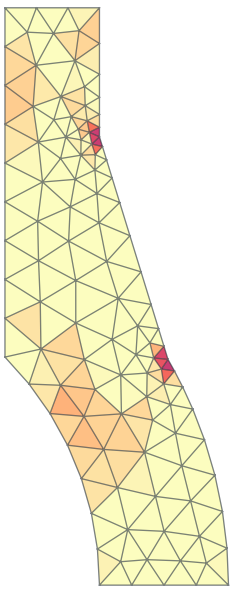
Where the error is: the automesher's is largest at the two kinks;
both agents shrink it there to a few small elements

gmsh automesher



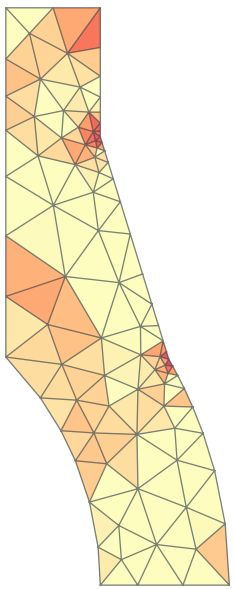
332 DOFs
field error 2.44 %

Early agent
(generation 1)



812 DOFs
field error 0.71 %
3.46x more accurate

Trained agent
(generation 10)



648 DOFs
field error 0.71 %
3.44x more accurate

von Mises error per element vs the true solution (relative RMS, log scale)
