Platen friction carries the strength: without it the prongs splay

left: equivalent plastic strain (0-0.10); right: largest principal stress (MPa); deformed at true scale;
CalculiX J2 + NLGEOM, 41k-node P2 mesh, dogbone material (teammates' renders)

frictionless platens: prongs splay, force tops out at 2.92 kN

sticking platens: still rising, 4.90 kN at the test's peak travel
